

ELECTRO²

The world's first
Oxygenated Electrolyte
Beverage with DMG

Using the latest Wall-Breaking
Technology, Electr-O2 is specially
formulated for use before, during
and after extreme athletic competition!

Designed to aid in a measurable
increase in your **BEST** performance.

Vermont Base Waters, LLC
156 Brentwood Drive, UI
Colchester, VT 05446

PLEASE RECYCLE YOUR ELECTRO-2 BOTTLES!

HEALTH - ENERGY - BALANCE

ELECTRO[®] is a high-performance electrolyte sport beverage with **DMG**. It is specifically **2** designed for athletes and people who exercise regularly to use before, during, and after competition or strenuous exercise.

ElectrO-2[®] combines Sodium, Magnesium, and Potassium complexes With N,N-Dimethylglycine (DMG) in a base of Purified, Oxygenated Water. Quantities of electrolytes and DMG are balanced to provide replenishment of expended Electrolytes in a form that is readily useable. ElectrO-2[®] utelizes the malate form of electrolytes, that are more absorbable than citrate forms. No overwhelming amounts of unuseable electrolytes.

Our OXYGENATED BASE WATER™ shortens recovery time by allowing Oxygen to pass directly to the bloodstream from the stomach. DMG increases the body's ability to process oxygen (O₂-Uptake), and also aids in removing lactic acid.

ElectrO-2[®] combines the perfect amount of Oxygen, Electrolytes, and DMG to support your body's need during high-intensity workout, exercise and/or competition.

What is N, N-Dimethylglycine (DMG)?

DMG is an amino acid, a derivative of Glycine (the simplest of the amino acids). It is a normal physiologically active nutrient found in low levels in such foods as cereal, grains, beans, and liver. Humans also produce DMG in small amounts. DMG is an intricate part of human metabolism and has been in use as a nutritional supplement for over 25 years.

DMG is a versatile, health-promoting and healing nutrient that can be used to maintain good health and to benefit performance and productivity.* It can also aid in the healing and restoration processes necessary to overcome a number of adverse health conditions.* DMG can support physical and mental performance by helping the body adapt to various forms of stress such as aging, poor oxygen availability, free radical damage, and a weakened immune system.*

As a nutritional supplement, DMG acts as a building block for the biosynthesis of many important substances such as Methionine, Choline, several hormones, neurotransmitters, and DNS (which supports mental activity). DMG can also promote high energy levels, a strong immune system, oxygen utilization, and the improved functioning of many important organs.

SPECIAL!!!!!!!!!!!!

12-Pack ElectrO-2[®]
delivered to your
office or home for
\$ 23.99 (same
price as retail with
FREE SHIPPING)

offer applies to states East of the
Mississippi and Texas, Nevada,
Arizona, and Colorado

**ElectrO-2 is available in
Orange and
Lemon Lime Flavors**

How does DMG work?

DMG supports transmethylation processes in the body. Transmethylation is a reaction where a methyl group is transferred from one molecule to another. It is a biochemical process that is essential to life, health, and regeneration of body cells* Vitamins, hormones, neurotransmitters, enzymes, nucleic acids (DNA, RNA), and antibodies all depend on the transfer of methyl groups to complete their syntheses. By its ability to give up its methyl groups, DMG helps in the production of S-adenosylmethionine (SAM-e), the most active transmethylating agent.* SAM-e is involved in over 41 different transmethylation reactions in the body.

ElectrO-2 is a Solos™ Beverage and is not meant to be consumed with food.
